

Coffee, fully managed.

Equipment. Beans. Service. One partner, no downtime.
The whole service, in order.

01 Scope and design	Site survey covering power, water, placement and traffic. Volumes modelled against your population and operating calendar. Machine capacity matched to measured demand, with the full commercial model presented before anything is signed.
02 Install and commission	Delivery and placement coordinated with your facilities team. Plumbing and commercial water filtration, commissioning and safety checks, and grind and recipe dial-in with our roasting partner. You sign off on a working service, not a delivered box.
03 Beans and consumables	Specialty beans from an award-winning Australian roaster, a certified B Corp with responsible sourcing through its supply chain. Milk, cups and cleaning consumables replenished on schedule, driven by actual consumption, before anything runs out.
04 Cleaning and maintenance	Preventative servicing scheduled by Ventra, not requested by you. Day to day, a nominated coffee champion on your campus runs the one-button daily clean and tops up beans and water between deliveries. We train them, and it takes minutes.
05 Telemetry and reporting	Every machine reports in. Volumes, faults and maintenance windows are monitored remotely, and your nominated contact receives monthly volume-versus-forecast reporting. No surprises at renewal: you see the same data we do.
06 One agreement, one invoice	A per-site base fee plus a consumption component, tailored to your institution and calendar. One agreement covers equipment, beans, service and reporting. Standard 30-day invoice terms.
